

Frontend Development

HTML Basics

HTML structures web pages using tags like headings, paragraphs, and links.

It forms the skeleton of any webpage.

CSS Styling

CSS is used to style web pages with colors, layouts, and fonts.

Responsive design helps adapt to different screen sizes.

JavaScript Fundamentals

JavaScript adds interactivity to websites.

It handles events, validation, and dynamic updates.

Frameworks

Libraries like React help build fast user interfaces.

Components improve code reuse.

UI/UX Principles

Good design improves user experience.

Consistency and simplicity are key.
